Discharge Head Section with Drive Shaft

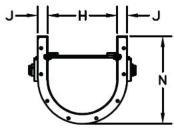

Model "RB" Flite-Veyor® features round bottom "U" trough design for those applications requiring thorough cleaning of the conveyed product from the housing. This is particularly important when conveying material of different types to prevent cross contamination from one run to the next.

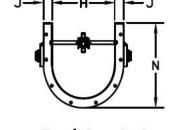

The all galvanized steel construction resists rust, corrosion and costly maintenance. Covers are hip roof design to help prevent water or moisture accumulation.

A wide range of capacities is possible by selection of trough size and chain speed. Heavy-duty chain and UHMW polyethylene replaceable flights create positive "enmasse" material flow, reducing friction with no metal-to-metal contact. UHMW chain return sprockets permit smooth operation.

NOTE:

Standard conveyors consist of: head discharge section with spherical roller bearings and adjustable take-ups; contoured end tail section; one standard inlet; intermediate sections with hip roof covers and UHMW sprocket idler returns (standard on 9" and 12"); chain with UHMW flights. Options include by-pass inlets, curved slide intermediate discharges with R&P, air or electric controls and steel angle return rails (option on 12", standard on 14" and 16"). Round bottom trough adapts to the standard Silver Span® conveyor support system. Drive packages are Class II rated and are furnished complete with drive cover.

Model "RB" Flite-Veyors® may be operated on limited inclines where required. Capacities and horsepower are dependent on the degree of incline. Check with factory sales personnel to obtain our recommendations for your project specifications.
